

CLEAN COPY OF CLAIMS AS PENDING FOLLOWING ENTRY OF
AMENDMENTS OF NOVEMBER 13, 2001

23. (amended) An expression vector comprising a recombinant polynucleotide comprising expression control sequences operatively linked with a first nucleotide sequence encoding an inhibitory polynucleotide comprising an antisense sequence of at least 7 nucleotides that specifically hybridizes to a second nucleotide sequence within an accessible region of the RNA component of a human telomerase (hTR), but that does not hybridize to a third nucleotide sequence within a template region of the hTR, wherein the second nucleotide sequence within an accessible region is selected from the group consisting of nucleotides 137-196, nucleotides 290-319, and nucleotides 350-380 of hTR.

25. (amended) The expression vector of claim 23 wherein the expression vector comprises a viral vector or a plasmid vector.

26. (amended) The expression vector of claim 25 wherein the expression vector comprises a plasmid vector contained in a liposome.

27. (new) A polynucleotide comprising a sequence of at least 7 nucleotides that specifically hybridizes to a first nucleotide sequence within an accessible region of the RNA component of human telomerase ("hTR"), but that does not hybridize to a second nucleotide sequence within a template region of the hTR, wherein the first nucleotide sequence within the accessible region is selected from the group consisting of nucleotides 137-196, nucleotides 290-319, and nucleotides 350-380 of hTR, and wherein the polynucleotide comprises a nucleotide analog or a non-naturally occurring nucleotide linkage selected from the group consisting of phosphorothioates, phosphoramidates, methyl phosphonates, chiral-methyl phosphonates, 2-O-methyl ribonucleotides and peptide-nucleic acids.

28. (new) A polynucleotide according to claim 27, when the polynucleotide sequence is selected from the group consisting of:
